

Matthieu Cortat created Basetica for the studio GVA (Geneva), in the context of the Open Switzerland project, on the occasion of its attachment to the Base group, bringing together 3 agencies in Europe (Brussels) and America (New York).

GVA wished to show its attachment to “Swiss Graphic Design” and what it carries in terms of quality, precision and rigour, while at the same time presenting a Switzerland quite different to the usual stereotypes that one can imagine.

Basetica is then, a “contemporary Helvetica”, open and with no frills.

Raw at times, but always clean and discreet, it revisits the International Swiss Style” with a certain irony.

## INTRODUCTION

## OWNERSHIP AND LICENCE

A typeface is created by a designer whose art is to transform an original typographic artwork into a computer file or files. As a consequence a typeface is – as a work – protected by laws pertaining to intellectual property rights and – as software – can not be copied and/or installed without first acquiring a nominative licence.

In no way, shape or form may a typeface be transmitted to a third party or modified. The desired modifications in the context of the development of a visual identity, can only be effected by the designer himself and only after acquisition of a written authorisation from 205TF.

The user of a 205TF typeface must first acquire of a licence that is adapted to his needs (desktop, web, application/epub, TV/film/videos web).

A licence is nominative (a physical person or business) and is non-transferable. The licensee can not transmit the typeface files to other people or organisations, including but not limited to partners and/or subcontractors who must acquire a separate and distinct licence or licences. The full text of the licence and terms of use can be downloaded here: Any person or entity found in breach of one or more terms of the licence may be prosecuted.

## THE OPENTYPE FORMAT

The OpenType format is compatible with both Macintosh and Windows platforms. Based on Unicode encoding it can contain up to 65,000 signs\* including a number of writing systems (Latin, Greek, Cyrillic, Hebrew, etc.) and numerous signs that allow users to create accurate and sleek typographic compositions

(small capitals, aligned and oldstyle numerals, proportionals and tabulars, ligatures, alternative letters, etc.). The OpenType format is supported by a wide range of software. The dynamic functions are accessed differently depending on the software used.

\*A Postscript or Truetype typeface can contain no more than 256 signs.

## ELEMENTARY PRINCIPLES OF USE

**To buy or...** By buying a typeface you support typeface designers who can dedicate the time necessary for the development of new typefaces (and you are of course enthusiastic at the idea of discovering and using them!)

**Copy?** By copying and illegally using typefaces, you jeopardise designers and kill their art. In the long term the result will be that you will only have Arial available to use in your compositions (and it would be well deserved!)

**Test!** 205TF makes test typefaces available. Before downloading them from [www.205.tf](http://www.205.tf) you must first register. These test versions are not complete and can only be used in models/mock ups. Their use in a commercial context is strictly prohibited.

## RESPONSIBILITY

205TF and the typeface designers represented by 205TF pay particular attention to the quality of the typographic design and the technical development of typefaces.

Each typeface has been tested on Macintosh and Windows, the most popular browsers (for webfonts) and on Adobe applications (InDesign, Illustrator, Photoshop) and Office (Word, Excel, Power point).

205TF can not guarantee their correct functioning when used with other operating system or software. 205TF can not be considered responsible for an eventual "crash" following the installation of a typeface obtained through the [www.205.tf](http://www.205.tf) website.

In cases in which inflammatory conditions of the respiratory organs are accompanied by continued night-sweats, the patients, if free of fever, will find it advantageous to ascend to higher levels where the evaporating power of the dry climate encourages the absorption of the cutaneous excretions. Invalids suffering from chronic catarrh accompanied by Emphysema must not be rash, but must content themselves with heights averaging from 2600' to 3900'. Those with weak hearts, palpitations, and so forth must, of course, avoid ascents altogether. The elevated valleys of Davos and Arosa are those most frequented for Phthisis. The best time to visit them is winter, when, after the season's snow has fallen, they are free from both dust and wind. In the case of Nervous Patients, with irritable conditions of their organs, the climate is not the sole factor to be considered in the choice of a health-resort. The general social conditions also demand careful attention.*
